NEW ADDRESS: Rt. 7, Frederick, Md. 21701::::301/473-8196

11/27/67

Dear Mr. Joy,

Your letter of 11/21 is very interesting. You are, of course, quite correct.

I would like as much detail as possible.

The actual angle of the back wound (footscript, HIFISA-H) was, according to the FBI, 45-60 degrees. According to the autopsy doctors, it was about 12 degrees. How did you compute 51-63? What is even more fascinating, is how you computed the lateral angle to be 43-45 degrees. That, of course, would wreck the Report in a new way, EXXKUXX. The President was then, quite obviously, turned to the right and the actual angle of his body to the TSBD was greater, but I hardly think that much.

I'm pressed for time, for in addition to the existing impossible schedule, I've just returned from a three-week speaking trip and am that much behind. I leave again soon. The fifth book is written and I must work on it.

Please, do, give me all the detail you can

Sincerely,

Harold Weisberg
